

Rio de Flag Flood Control Project

- Monthly Update -

The Rio de Flag Flood Control Project is a twenty-year effort between the City of Flagstaff and the U.S. Army Corps of Engineers to prevent life/safety hazards and property damage caused by significant flood events in Flagstaff. It is a \$122M project with 65% of funding provided by the Army Corps. Construction along the Rio de Flag and Clay Avenue Wash will increase the capacity of the channel and significantly reduce flooding in neighborhoods such as Southside.

Once completed, this project has the potential to prevent damage to approximately 1,500 structures in Flagstaff, valued at over \$916M. The Project will also remove the probability of \$93M in economic damages due to flooding and remove restrictive requirements for floodplain redevelopment.

December 2021 Update

- Work continued this month on refinement of the design plans and development of the real estate documents. The Phase I legal descriptions were delivered to the Corps on December 9, in accordance with our Real Estate schedule, for their review and development of the scope of work documents for each parcel. This will allow for appraisals to begin.
- On December 8, an executive meeting was held with City electeds and staff, the Army Corps, and BNSF Railway to discuss expediting the Phase I Construction and Maintenance Agreement (CMA). The group reached consensus to develop an agreement that represents design intent and financial commitments for the Downtown Mile project (including the Rio de Flag) in order to move forward with CMA 1 execution.
